

# AI Collaboration Notes

## Overview

This document summarizes how AI assistants supported the project.

## AI Tools Used

ChatGPT for explanations, debugging and documentation.

GitHub Codex for isolated implementation assistance.

Gemini API as the application's AI model.

## Manual Work

All generated code was reviewed, integrated, tested and debugged manually. Architecture and final implementation decisions were made manually.

## Challenges

Embedding compatibility, MongoDB Atlas connectivity, Gemini Function Calling migration.

## Future Improvements

Streaming responses, hybrid search, OCR support, reranking.
